PROFESSIONAL SUMMARY

Data and insights leader who builds the data foundations and analyses behind senior decisions on people, programmes and investment. Over eight years in higher-education analytics, most recently leading business intelligence for King's College London's philanthropy and alumni function, and before that heading Oxford's insights unit. Track record of turning scattered, undocumented data into reliable pipelines, designing proportionate validation, and presenting defensible conclusions to executive leadership. Judicious user of LLMs to accelerate data engineering and analysis with appropriate critical oversight and validation.. MIT MicroMasters in Statistics and Data Science (grade A) and sustained engagement with AI safety since early 2025, including a SPAR research fellowship.

EXPERIENCE

King's College London, London, UK — *Senior Business Intelligence Manager*

June 2026 -

Responsible for building out Business Intelligence function within Philanthropy and Alumni Engagement directorate.

- **Built a machine-readable catalogue of the team's data estate.** The CRM's nightly SQL Server sync had hundreds of undocumented tables, and existing Power BI reports had no record of their sources or logic. Used LLM-assisted Python scripts to map every table, relationship, dependency, report source and transformation, plus usage.
- **Designed the catalogue as the foundation for an AI query agent**, enabling colleagues to ask free-text questions and have data sourced and transformed using documented reporting logic.
- **Defined and codified a data validation framework** to build accuracy and trust in reporting, proportionate to the capacity of a small team.
- **Delivered two major reports for senior leadership**, guiding high-level fundraising portfolio management and personnel and resourcing decisions.
- **Introduced a monthly sprint format for prioritising and delivering high-impact BI projects**, and built a portal for tracking and sharing deliveries with stakeholders.

The University of Oxford, Oxford, UK — *Senior Data & Insights Analyst*

2017 - Jan 2025

- **Built automated data infrastructure.** Replaced ad-hoc reporting with automated Python pipelines and live Tableau and Power BI dashboards, used by hundreds of staff; report creation fell from days to minutes.
- **Advised executive leadership.** Partnered with the Pro-Vice-Chancellor and Chief Fundraising Officer to inform investment and recruitment decisions, and led cross-functional reporting for a multi-billion-pound fundraising campaign.
- **Led data governance.** Directed GDPR compliance for 400,000+ consent records, including risk analytics and organisation-wide consent-collection toolkits; chaired the data governance group (2021–22). Awarded a staff excellence prize for delivery and stakeholder communication.

- **Managed people and process.** Managed the insights unit (2018–25) and the digital marketing unit (2021–22), leading a team of three analysts and web developers.
- **Established standard for rigorous analysis.** Applied Python (Pandas, SciPy, scikit-learn), SQL, regression, hypothesis testing and forecasting, validating assumptions and prediction accuracy. Designed a cost-forecasting tool that cut transaction fees by ~30%.

Oxford Brookes University, Oxford, UK — *Admissions Officer & Programme Administrator*

2014 - 2016

- Managed applicant workflows for health and life sciences programmes; built automated reporting that raised team productivity by 25%.
- Designed an automated transcript-generation process that eliminated manual errors and cut processing time by 75%.

EDUCATION

MIT online — *MicroMasters in Statistics and Data Science*

2025-2026 Probability, statistical inference, Bayesian methods and machine learning. Overall grade: A; final proctored exams equivalent to on-campus PhD-level coursework.

King's College London — *PhD Music Research*

2008-2013 Published 9 academic articles (6k+ views); presented at 12+ conferences.

University of Melbourne — *B.A. (Hons - 1st) / B.Mus. (Hons - 1st)*

2001-2006 Awarded faculty prize for BA(Hons).

AI SAFETY & TECHNICAL FOUNDATIONS

SPAR Research Fellow (AI safety) (Spring 2026)
Collaborative project examining policy implications from AI agents and their interface with the economy.

Apart Research AI Forecasting Hackathon (Nov 2025) **- awarded second prize.**
Demonstrated capability in AI risk forecasting and scenario analysis under competitive conditions.

ML4Good AI Safety Bootcamp (Sept 2025)
Technical foundations in AI safety evaluation, alignment challenges, and risk assessment methodologies.

BlueDot Impact: Intro to Transformative AI (Jan 2025)
AI governance frameworks, policy implications, and institutional responses to frontier AI development.

Google/Kaggle 5-Day AI Agents Intensive Course (Nov 2025)
LLM capabilities, agentic behaviour, and technical drivers shaping frontier model risk profiles.

SKILLS & ADDITIONAL INFORMATION

Data and engineering: Python (Pandas, NumPy, SciPy, scikit-learn, PyTorch), advanced SQL (SQL Server/SSMS), automated pipelines, data cataloguing and lineage, LLM-assisted development.

Statistics: regression, hypothesis testing, forecasting, Bayesian inference.

Reporting: Power BI, Tableau, executive presentations.

Certification: Google Cloud Professional Data Engineer (held 2023–25).

Languages: English (native); intermediate Italian, German and French.
